Excitation, Frequency modulation, Statistical analysis,
*Measuring devices (Electrical and electronic).

A new method for measuring the principal elastic para-
meters of solids (modulus of elasticity and Poisson
ratio) and their internal damping (friction) is described.
First, the principle of the method has been indicated
which uses the novel technique of frequency modulation
(Mechanics, TT, v. 9, no. 12)

DESCRIPTORS: *Diesel engines, *Turbines,
*Turbosuperchargers, *Gas turbine nozzles.

An investigation of various types of turbochargers and
of the operation of the engine with a variable-nozzle
turbocharger leads to the following conclusions. In
charging small engines the best results are obtained by
using turbochargers with a radial centrifugal turbine
because this unit has a high efficiency, the turbine
wheels are cheap and easy to make (especially by using
precision casting techniques), and because its speed
